

Welcome to 6P

Class Teacher: Mr Poulson

Teaching Assistants:

Mrs Robertson

Mr Hitchiner

Our P.E lessons will be Monday and Friday

Please see the Curriculum Overview for what we are learning about this term.

Update January 2018

Maths

Maths will be focused on number for the next half term. This will include: decimals, percentages and algebra, although we will continue to develop the children's formal and informal arithmetic methods. We will also be pushing the children to further develop their reasoning and problem solving skills to deepen their understanding.

English

We will be using 'The Boy and the Bear on a Boat' as our inspiration for next half term. Using this narrative, the children will innovate and invent their own narratives. They will then adapt their learning to write in different genres, including diaries. Presentation will continue to be a focus next term, as will the children's spelling and handwriting.

Science

Electricity will be the focus for science next half term. We will use the children's questions and ideas to start the learning off. The children will use these questions to formulate investigations, recording results accurately and drawing their own conclusions from the data.

Creative Links

Next half term, children in 6P are going to learn to be an apprentice geographer. They will use fieldwork techniques, collect data and carry out research to find solutions for a geography related problem.

Other comments

The learning powers that the children have been developing over the previous term: resilience, reciprocity, resourcefulness and reflectiveness, will again be very important. Our aim is to create independent learners who are ready to fulfil their potential when they transition to secondary school.
